FLOORS WITH SCANDINAVIAN SPIRIT

SCANDI FLOOR wood flooring products embraces the best traditions of Scandinavian woodworkers which involves love of nature, patience, aspiration to achieve the highest quality and most consistent product possible. Brand originates from family wood processing and manufacturing traditions that have been passed down through two generations.

SCANDI FLOOR brand combines the best old traditions with the latest technological advancements. The expertise and the achievements in mechanical engineering, tool making, painting varnishing and technology of adhesive materials are being accumulated within our company and used in our daily practices.

ENVIRONMENT

We adhere to environmentally responsible standards, to ensure both quality and sustainability. We carefully choose materials and components, from adhesives to finishes that emit the lowest possible amount of pollutants.

Our products meet the highest standards for toxic emissions. Scandi Floor takes pride in keeping the products with the smallest formaldehyde level.

**WE TAKE PRIDE IN BEING
ENVIRONMENTALLY CONSCIOUS.**

CLIMATE

Moisture conditions, humidity levels and temperature greatly affect the behaviour of natural wood floors. They must be strictly controlled during storage, transportation, and installation to prevent destructive process.

Prior to installation, ensure that all internal site conditions are stable, dry and suitable for particular hardwood floor. Room temperature of between 18° - 22°C (65° - 73°F) and Relative Humidity of between 45 - 65% must be maintained at all times.

Remember that wood flooring requires time to reach moisture content level in equilibrium with the surrounding environment. Hardwood floor boards must be left in the room unpacked to acclimatize to the moisture content and temperature of the new home before the installation for at least 48 hours.

UNDERFLOOR HEATING

Homeowners have become increasingly aware of the benefits of modern underfloor heating over conventional radiator systems.

For heated floors we recommend to use our 14 mm thick (no more than 18mm as any thicker will hinder the efficient performance of the system) either laid as a floating floor, or glued down to the subfloor. Glued down floors distribute the heat more uniformly.

It is important to remember that the surface temperature of the new hardwood floor must not exceed 27°C (81°F). Higher temperatures can cause cracking of the top layer or excessive gapping between boards.

Always ensure that you change the temperature gradually at the start and end of a heating. The maximum variation in temperature should not be more than 5°C within 24 hours.

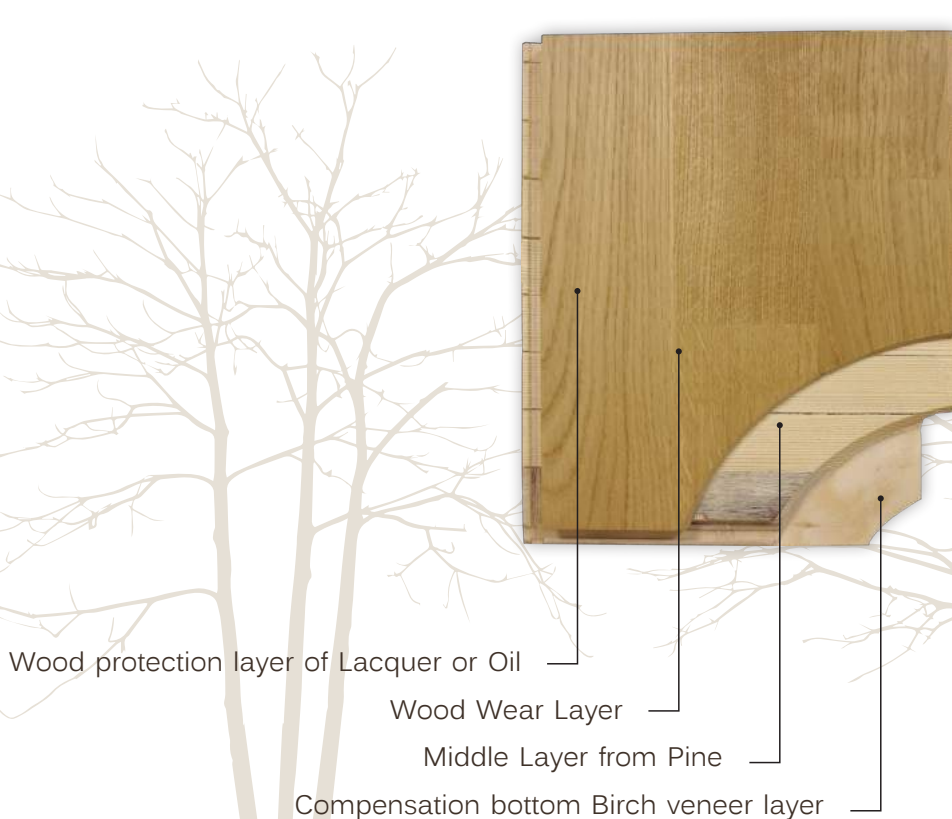

WHY CHOOSE SCANDI FLOOR

Our team of highly skilled specialists takes the utmost care at all stages of production process, which are carried out within our factory. This helps us to achieve the highest quality and most consistent product possible.

Unilin Lock – strong and reliable lock system easy for installation without glue.

Extremely strong profiled ends due to the use of Birch plywood in the middle layer.

Bottom layer of the board is made from birch veneer which is more humidity resistant than spruce or pine.

OUR VISION

PROFESSIONAL EQUIPMENT

Use of the machinery with diamond tooling helps us to minimize the losses of timber of valuable hardwood species such as oak, walnut and ash, and to maximize production output.

QUALITY & SUSTAINABLE MATERIALS

Our main timber resources are valuable hardwood species and coniferous materials. In our production process we always make sure that every single plank of hardwood timber is used. Sawdust and grinding dust are being used for the heating of the factory and process water. A unique air dual purification system enables us to bring back the heat into the production premises.

HIGHLY SKILLED & PASSIONATE CRAFTSMEN

A team of experienced technologists and designers makes a significant contribution by constantly innovating and designing new products by utilizing revolutionary solutions in the field of finishing materials.

FINISHING SOLUTIONS FROM PROFESSIONAL SUPPLIER

Lacquers and oils by Bona – a famous Scandinavian manufacturer of hardwood floor care products – provide our wood floors with silky appearance, durability and make them eco-friendly.
